

ShipnGrab is going to build and fix a full end to end delivery network that will be available for every merchant and sole trader.

African parcel delivery infrastructure is broken. ShipnGrab is going to fix it with the help of a vendor agnostic automated lockers network starting from Nigeria and expanding later to other countries.

ShipnGrab is an easy to use solution to send and receive products that you have bought or sold online or that you just want to send to your friend. The solution adds the missing security layer between online sellers (e-commerce, whatsapp groups & other social media channels) and their customers by facilitating the whole parcel logistics infrastructure, return and sending process.

The automated parcel lockers are a much easier option to your regular courier or other shipping providers. The platform can be integrated with online shops or simply use them to send a package from one locker to another. The highest focus on end user experience makes it popular among all main e-commerce players.

ShipnGrab solution enables every business owner or individual to provide state of the art delivery solutions with secure and innovative logistics infrastructure.

During the analysis phase, we have met with several potential partners and customers, among them Konga, Total, Max.ng and other market leaders in online shopping.

The team running the whole project has strong experience in Nigerian leading ecommerce and logistics management, with technological roots from Estonia.

Kickstart for the project will be in Lagos, Nigeria and from there on expansion of cross country and later moving on to neighbouring countries.

If You would like to be part of the project, please join our waitlist at [www.shipngrab.com](http://www.shipngrab.com) or drop us a line [sven@shipngrab.com](mailto:sven@shipngrab.com)
